REPORT ON GOVERNMENT SERVICES
TO RURAL AMERICA

MESSAGE

FROM

THE PRESIDENT OF THE UNITED STATES

TRANSMITTING

THE FIRST ANNUAL REPORT ON GOVERNMENT
SERVICES TO RURAL AMERICA, PURSUANT
TO THE AGRICULTURAL ACT OF 1970

MARCH 1, 1971.—Message and accompanying papers referred
to the Committee on Agriculture and ordered to be printed

LETTER OF TRANSMITTAL

To the Congress of the United States:

I am transmitting today the first annual report on government services to rural America, as required by the Agricultural Act of 1970.

Much of the information is about fiscal year 1970, since we do not have all the information in yet on the 1971 fiscal year. However, even the changes over our first full fiscal year in office showed important gains in the Federal Government's concern for the well-being of rural areas.

As examples, in fiscal 1970, we increased Federal support for waste treatment grants in rural areas by 174% over the previous year, and increased manpower development grants in such areas more than 50%.

We have long recognized that much of the housing in rural America is substandard—in fact about half of all substandard housing is in rural America. We have made real gains in this area. While our 1970 rural housing loan efforts increased 58% over 1969, in 1971 we will have increased these loans another 88%, to an annual amount of over one and a quarter billion dollars.

The report documents other major strides toward improving services to those millions of our people who live outside metropolitan areas.

It is my hope that our next report will show far greater progress. This is because I earnestly hope it will follow passage of some of the initiatives I urged in my State of the Union Message. These new initiatives include:

—Revenue sharing which, in the upcoming budget, can provide \$16.1 billion in funds to flow from Washington in such a way that much real decisionmaking would be moved back to the States, cities and rural communities of America.

I have proposed not only \$5 billion in unrestricted, general revenue sharing, but over \$11 billion in various "special revenue sharing" grants. Among these is special revenue sharing for "rural community development." Originally budgeted at a level of \$1 billion, I can announce today that we have found it possible to make available \$100 million more for this important purpose. Furthermore, nearly all the other special revenue sharing funds, for manpower development, for education, for transportation, for law enforcement, and even in some cases for urban community development, will have significant benefits for rural America.

—A major reorganization of the civilian agencies of the Federal Government. The purpose is to make Federal program operations work better for the individual citizen and his community. The complaints most frequently heard about Government are that it is too costly; that it fails to match performance to promise; that it is too far from people; that there is nothing the individual person can do about it. We intend to reduce the cost of Government in Washington; to organize it for performance; to return government to the people; to give the people the opportunity to do something about it, by bringing government back to where the people are.

Under our reorganization, economic and community development would be accorded high priority—the objective being to maintain and develop viable communities of all sizes.

—My proposed welfare reform. In this needed change of our welfare system, many Americans in rural areas would benefit immediately, while strong incentives would be created to move those able to work into productive employment.

would also help revitalize the economy of rural areas.

—My proposed comprehensive health strategy. My recent special message on health sets forth proposals to provide minimum national health insurance standards for all Americans, regardless of where they live, or what their income. At the same time, my proposals recognize that even with these improvements in the power to *purchase* medical care for all, they would be frustrated without assuring that care can be *supplied* where it is needed.

There is a shortage of doctors and medical personnel in this Nation; but there is also a problem of distribution of medical services. Those in remote rural areas often feel this lack more acutely than those in inner cities. We mean to provide Federal assistance to guarantee that the sick and injured in the rural sectors of America have the opportunity for the same high quality care that is available to Americans in other places. To help bring such services to rural areas, we propose to establish new area health education centers in medically underserved areas, and expand programs to encourage doctors, nurses, and physicians' assistants to serve in scarcity areas.

It is gratifying to be able to report to you that this administration is demonstrating its commitment to the restoration and enhancement of the vitality of rural America.

RICHARD NIXON.

The WHITE HOUSE, *March 1, 1971.*

REPORT TO THE CONGRESS ON THE AVAILABILITY OF
GOVERNMENT SERVICES TO RURAL AREAS

Outlays for Selected Programs, by State and Area, FY 1970 (one table for each Department or independent Agency.)

INTRODUCTION

Section 901(a) of the Agricultural Act of 1970 calls for the President to report annually to the Congress concerning the availability of services from various Federal programs in rural areas.

This report is presented in fulfillment of this requirement. It also reports on the general nature of socio-economic conditions in rural areas.

BACKGROUND STATEMENT

As a background to the consideration of specific program measures for the benefit of people living outside of metropolitan areas, the following statement highlights some of the social and economic trends of recent years and the current relative status of this segment of U.S. population.

The American Scene Today

Development of rural America is viewed by many as the key to "balanced growth", including a "pressure valve" for megalopolis, the source of recovery of ecological health, and an escape from congestion, pollution and other social ills.

to large urban centers. What, really, is rural America? A vast, unpeopled, space where there is no promise, no future? Not at all. It is vast, but it is also peopled by about 30 percent of the Nation's population in open country and in communities of less than 50,000 people. It suffers many disadvantages when compared with metropolitan areas, but it is not without promise and it certainly does and must have a future. It is an area of historic promise, much of which has already come to pass, yet much remains for the future.

Rural America contains about one-third of our population. Within this segment of our population great changes have taken place. The farm portion, for example, declined by 13 1/2 million from 1950 to 1970, a loss of 68 percent.

Technological advance, increased mechanization, specialized production, larger size of farms, and other changes have reduced the need for manpower on farms and transformed most of rural America into a non-farm economy. Meanwhile, with unprecedented rural to urban migration, we have become an overwhelmingly urbanized society. Where does this leave rural America in the scale of American values, opportunities and future?

No national consensus to answer that question has so far emerged

way to alleviate the "crisis of the cities", and to promote balanced growth and vitality in many of the smaller towns and cities outside of the larger metropolitan areas. Stirrings at the grassroots of thousands of small towns indicate a revival of business, industry, community and economic development. What are the facts?

Population

It is true that large population changes occurred during the decade of the 1960's with about two million people leaving the countryside for the cities. Metropolitan America grew from 112 million people in 1960 to 130 million in 1969, a change of 15 percent, more than twice the growth of 6 percent in non-metropolitan areas. Metropolitan areas will continue to grow because of the huge population base residing there.

The contribution to this increase from rural areas has already lessened. It is estimated that rural counties lost about two million people through out-migration from 1960 to 1970, but this number is less than half as large as the outpouring of 4.6 million people during the 1950's.

The migration picture in rural areas is varied. While some parts of the country lost population heavily--where nonfarm job growth did not compensate for the decline in agricultural

employment--other sections reversed the out-migration pattern of the preceding decade and gained population. At the same time that the Great Plains and inter-mountain areas of the West were declining rapidly in population, portions of the southern Piedmont, middle Tennessee Valley, eastern Oklahoma, and northern and western Arkansas grew in population during the 1960's.

Employment

A principal factor in motivating people to move from one part of the country to another is the search for employment, or for better employment. This contributed to the patterns of population and employment change affecting rural America in the 1960's. Nonfarm employment in rural America grew slightly faster, overall, than in metropolitan areas from 1960 to 1970. Employment gains in manufacturing and contract construction in some rural areas were the principal contributors to this trend. The rural areas in which gains in nonfarm employment were greatest coincided strikingly with those areas with growth.

Income

Level of income is, of course, an important component of

in comparison with metropolitan areas, although there was improvement between 1959 and 1968 in reducing the relative difference. Median family income (in 1968 dollars) in metropolitan areas in 1968 was \$9,411, compared with \$7,531 in 1959; in non-metropolitan areas, the median was \$7,342 in 1968, up from \$5,288 in 1959. The increase outside of metropolitan areas between these two dates was 39 percent, while in metropolitan areas it was 25 percent.

Community Assets

Measurement of what is called the "quality of life" is difficult because of lack of quantitative data and the presence of intangible factors. People want jobs and an adequate income to support an acceptable standard of living. But they also require other things including a good education for their children; accessible, quality medical care; adequate housing at a price they can afford; and other community services such as police and fire protection, clean water supply, sewage disposal, transportation facilities, and recreational and cultural opportunities. In many rural areas of the United States, these services and facilities are inadequate; in some places virtually non-existent in whole or in part. In sparsely settled areas and those

declining in population, the shrinking tax base makes the delivery of such services increasingly costly and inefficient.

Education

Universal public education has made one measure of rural-non-rural differences insignificant, namely educational attainment as indicated by median years of school completed by persons 25 to 29 years old. Metropolitan and rural areas are virtually the same at 12 plus years. For the Negro population of this age group in rural areas, however, attainment drops to 10.9 years. The percentage of high school graduates in metropolitan areas is higher (78 percent) than in rural areas (69 percent) in 1969. Metropolitan areas also show a higher percentage of college graduates, 18 percent, as compared with 12 percent in rural areas.

A crucial problem that parts of rural America face in supporting a modern high school is an inadequate population base, especially in areas of sparse or declining population. Determination of the number of people necessary for a good high school cannot be arbitrarily stated, but estimates have been made by educators and others as to approximately the desirable population size.

Many small towns and their hinterlands in rural areas cannot muster a population base of sufficient size to be competitive with larger places in terms of teachers' salaries, library and laboratory facilities, and the specialized equipment of today's high schools.

Health

In addition to good schools, people look for accessibility to health care in choosing where they want to live. Rural areas offer the services of about as many practitioners as do metropolitan areas, but, because of distances, they are less accessible to rural people than these physicians are to urban people. Rural areas have fewer specialized medical personnel per 100,000 population than do urban areas, including hospital-based physicians, nurses, and pharmacists. They also have fewer dentists. The number of hospital beds located in rural areas appears adequate, but many of the hospitals in rural areas are more utilized by urban than by rural people, and others are in need of modernization and more sophisticated equipment. Where income is low and population sparse, non-metro communities find it difficult to acquire access to medical specialists and modern hospital facilities.

Housing

A prime asset in any community is adequate housing for the residents. For a number of reasons, this attribute is more often found in metropolitan than in rural areas. While there has been improvement in the rural housing situation generally since 1960, the proportion of substandard units (dilapidated or lacking a basic plumbing item) continues to be higher in rural than in urban areas. The number of substandard rural housing units was reduced from one-third to one-fifth from 1960 to 1968. Obstacles to greater improvement in the quality of rural housing, as opposed to that in metropolitan areas, include: lower income levels, less availability of credit for long-term mortgage financing, low density of construction activity, and usually higher costs for debt service. Although housing starts since 1959 have been greater than the formation of new households, much remains to be done in the housing field in all areas.

Electricity and Telephone Services

One of the more valuable amenities in the United States has been brought about by the advance of electrification and

added immensely to the standards of living for rural people. The most remote hamlet can be reached by telephone, and news is simultaneously received nearly everywhere by radio or television. Physical and social isolation of distant places in the countryside has been alleviated by electronic communication to an unprecedented degree. Metropolitan housewives fare slightly better than rural in possession of telephones, 85 percent compared with 73 percent in 1955. Additionally, the quality of service is better in metropolitan areas. Many rural households still have more than 4-party service. But radio and/or television are found in about 95 percent of all households regardless of residence. As a result of the programs of the Rural Electrification Administration over the years, over 98 percent of the Nation's farms are now served by electricity.

The Future of Rural America

What, then, can we say about the promise and future of rural America? What has contributed to the revitalization of some areas and not to others? There is no single answer. As mentioned above, population and nonfarm employment growth appear to go together in many places. Factors which may be

credited with rebuilding parts of rural America are associated with improvements in communication and transportation, including the interstate highway system; lower land and development costs outside of cities; supplies of low-cost labor with adequate skills; the freedom to locate many industries away from natural resource supplies, rivers, and railroads; and the preference of many people for the stability and slower pace of small towns and cities.

There appears to be considerable promise in undergirding non-metropolitan America for renewed vigor and overall development for achieving more balanced National growth and for improving environmental quality. The main thrust of national economic development continues to be associated with expansion in major population centers of the Nation. This tide can be diverted toward rural America, but not easily.

PROGRAM AVAILABILITY IN RURAL AREAS

The selected programs for inclusion in this report are those for the following services: telephone, electrical, water, sewer, medical, educational, manpower, housing, small-business assistance, law enforcement assistance, food assistance, and income maintenance (excluding Social Security).

The major areas of Federal programs which are not included are: defense, foreign assistance, agriculture, natural resource, regulatory, transportation, recreation, and research. Some of these areas were omitted because they either are covered in the other reports required by Title IX, or, such as defense and foreign assistance, were not germane. Other areas, such as agriculture and natural resource programs were not included because their distribution is determined more by geography than by population. The emphasis in this report is upon services available to people instead of areas. Transportation and recreation programs were not included because the users of the facilities are not necessarily those living closest to them. Although the list of programs selected is comprehensive, it is not all inclusive. Programs not included on the list may provide significant Government services to rural residents. Thus, the absence of a program from the list should not be taken as an adverse reflection upon its contribution to rural development.

Selected examples of successful efforts to expand the availability of Federal programs to rural people, taken from statements by agencies, are as follows:

- USDA rural housing loans in FY 1970 increased 50 percent over the 1969 level for a total of \$663 million in non-SMSA's. Projected level for FY 1971 will be over three times the 1969 level.
- Food stamp program began operation in 230 non-metropolitan project areas during FY 1970 in rural areas. An additional 228 rural counties were scheduled for operation during FY 1971.
- Non-metropolitan area planning grants for HUD increased from the \$1.2 million provided for 57 districts in 1969, to \$2.7 million for 122 districts in 1970; \$5.0 million is planned for 150 districts in 1971.
- Sixty percent of HUD public facility loans during FY 1970 were approved for projects in non-metropolitan communities.
- The Employment Service established 21 smaller community program offices during FY 1970 which operated in 19 States serving an average of three rural counties in an effort to bring more effective employment services to rural areas.
- OEO made legal services grants of over \$6.5 million during FY 1970 under a growing legal aid services program for non-metropolitan areas.
- Neighborhood health services are receiving increasing attention in rural areas. By April 1970, 14 projects were under way testing differential comprehensive health care system models in non-metropolitan areas. Federal outlays during FY 1970 for neighborhood health centers in predominately non-metropolitan areas totaled \$8.2 million.
- Of the 65 public library construction projects approved during FY 1970, 37 were in areas of less than 25,000 population.
- Of the 40 non-commercial educational and radio stations which received Federal grants

and grant outlays provided under programs of the Economic Development Administration during the first half of FY 1970 were utilized in non-metropolitan areas.

- About half of the Federally administered projects under the Vocational Education--Innovation Program were focused on young people in non-metropolitan areas.
- Of the 78 current Teacher Corps projects, 35 percent assist school districts in non-metropolitan areas including Appalachia, the Ozarks, migrant areas in several regions, and Indian populations in six States.
- Higher education--work-study and cooperative education grants for institutions in rural areas increased by about 20 percent in FY 1970.
- About three-fourths of Appalachian demonstration health project grants were utilized in non-metropolitan areas during FY 1970.
- Of the total of \$233 million in hospital construction grants under the Hill-Burton program for FY 1970, about 47 percent were utilized in non-metropolitan areas.
- Of the 764 full-year programs under Project Head Start approximately 40 percent are rural.
- Under the Aid to Families with Dependent Children Program special emphasis has been given to recruit staff for rural areas. In the southern States, about 50 percent of these programs serve a predominately rural population.
- Rural electrification and telephone service has been given a boost by actions of this administration in support of creation of a new private electrification bank (National Rural Utilities Cooperative Finance Cooperation), and its proposal for creation of a mixed ownership telephone bank. (This proposal was approved by the Senate during the last session of the Congress.) The former will provide supplemental

...million during 1972. The telephone bank would provide added loans of about \$94 million during 1972.

Despite the progress made in extending the services of Federal programs to rural people, much remains to be done in improving this outreach, especially for some of the manpower, education, health and other human resource programs. Such efforts are underway; for example, there has been increased effort in the Department of Labor in the past year to extend manpower and other services to rural residents. Two programs in particular, Operation Mainstream and the Smaller Communities Program appear to have provided rural outreach.

The data in the attached tables reveal that rural areas are receiving about the same proportion of program

outlays, overall, as their share of national population.

They receive more than their proportionate share of outlays of selected programs of USDA, USDC and SBA, but less overall of health, education, labor, HUD, Interior, Justice and OEO program outlays. These results vary widely across States.

Major increases in Federal outlays in fiscal year 1970, as compared with fiscal year 1969, occurred in non-SMSA areas for most of the selected programs, (Table 2.) These increases

manpower development and training programs of HEW, construction grants for waste treatment by the Department of Interior, and most OEO programs.

The purpose of the SMSA-non-SMSA breakdown of the data is to compare program outlays with population distribution.

Such comparisons, however, require careful interpretation.

The distribution of any given Federal program may not be directly proportional to the population for a number of reasons. First, the intended beneficiaries of the program may not be uniformly distributed geographically. Some beneficiaries may be more costly to serve than others and, therefore, the funds may not be distributed uniformly even though the benefits deriving from them may be so distributed. Also, the cost of delivery to some people, due to isolation or other causes, may be prohibitive.

Some programs have statutory limitations which restrict them to certain geographical areas or sizes of cities. Additionally, the reported point or county of delivery of Federal funds may not be the ultimate destination of the financial assistance. Despite these limitations, the data do indicate, generally, availability of Federal program services to rural people.

ments that have been and will be made in non-metropolitan areas. It also indicates that there are certain difficulties which remain to be overcome in attaining the desired levels of economic and social development in non-metropolitan areas. While final attainment of these development objectives will not be an easy task, it is a task on which major strides forward have been made, and to which this Administration is firmly committed. With dedication and perseverance by all levels of Government, these objectives can and will be attained.

Information on the Federal outlays in rural America of about 160 Federal programs provides the basis for this report. It was decided to utilize available data in the Federal Information Exchange System for this first report. This system reports on a twice-a-year basis the outlays for each State and county for over one thousand Federal programs. These data are supplied by the Agencies to the Office of Economic Opportunity which has responsibility for the preparation of the Federal Outlays report. These outlay data are subject to a number of limitations as described below. Nevertheless, they represent the best comprehensive set of data on a geographical basis for detailed Federal program outlays.

Although output measures would provide a more meaningful basis by which to judge the impact of Federal programs, they are not currently available on a systematic and comprehensive basis for the full range of Federal programs. Thus, levels of program inputs, i.e., outlays were used for this initial report.

The information reported in this study pertains only to that portion of Government-assisted services provided

through Federal programs. It does not include that portion of programs which are supported by state and local Governments, nor does it include the matching contribution of State and local units under the various Federal programs. Thus, the measures in this initial report do not measure the total availability of Government-assisted services, but only that share provided through Federal programs.

Data for the complete fiscal year were not available in the Federal Information Exchange System for all the programs selected at the time of preparation of this report.

Agencies with only the first half of fiscal year 1970 data include the Department of Labor, the Department of Commerce, the Department of Justice and the Department of Housing and Urban Development.

For the purpose of this report the definition of Standard Metropolitan Statistical Areas (SMSA) and non-SMSA's were used to class the counties into urban and rural groups.

A Standard Metropolitan Statistical Area contains at least one central city with 50,000 population or more. It includes the county in which this central city is located and adjacent counties that are found to be metropolitan in character and economically and socially integrated with the

non-SMSA differs significantly from the urban and rural census concepts which define urban-rural as all persons living in places of 2,500 population or less, or in open country.

The SMSA-non-SMSA definition was used instead of the traditional census urban-rural concept because

- the SMSA definitions take into account the character of the entire area and the relation to the central city, whereas, the urban-rural definition is based largely on the size of the place;
- more current and comprehensive data are available on the SMSA-non-SMSA basis.

Thus, throughout this text the SMSA-non-SMSA definition is used. However, the terms, "non-SMSA", "non-metropolitan" and "rural" are used interchangeably.
